

Kothari International School

Grade K1

Space Science

The students of K1 were introduced to the solar system through a fun activity on February 19th, 2021. This activity was a part on the ongoing theme 'Stars and Sky' where the students were shown the main elements of the solar system like the sun, planets, stars, satellite, astronauts, rocket etc. through PPT's and videos.

The students did a simple activity in which a play dough, ball and a plate was used to explain how earth moves around the sun. Orange dough in the center of the plate represented the sun and ball represented the Earth. The ball was made to rotate in the plate and in the center sun was fixed. It was a fun filled activity for the students.
